Fellowships in Alcoholism Research, MD's or Ph.D.'s
National Institute of Alcohol Abuse and Alcoholism, Bethesda, MD and Surrounding Area

The Laboratory of Clinical and Translational Studies (LCTS) at the National Institute of Alcohol Abuse and Alcoholism (NIAAA), one of the National Institutes of Health (NIH), Department of Health and Human Services (DHHS), is recruiting for post-doctoral fellow(s) (MD and/or PhD) to conduct research in the laboratory located within the Mark O Hatfield Clinical Research Center on the main NIH campus in Bethesda, MD. The laboratory uses translational strategies and human studies, to investigate genetic susceptibility and neuroadaptive processes underlying the development of alcohol dependence and related phenotypes. The lab also conducts studies aimed at identifying potential molecular and behavioral targets for novel treatments. The work will consist of participating in clinical research focused on new pharmacological approaches (e.g. neuroendocrine pathways) and novel medications for alcohol and drug addiction. Clinical studies may recruit patients affected by alcohol, tobacco or drug dependence, as well as research volunteers. Biobehavioral paradigms and pharmacological challenge tests are used in the context of human laboratory studies.

Requirements: Candidates must have an M.D. or Ph.D., and less than 5 years postdoctoral experience. Strong background in clinical addiction and/or clinical pharmacology, or related field is highly desirable.

To Apply: For consideration, please email a CV, bibliography, cover letter with a brief description of research experience and interests, and three references to: lctsresearch@mail.nih.gov.
